AN INCOMPLETE READING LIST FOR CAUSAL INFERENCE SEMINAR

Some but not all of these things on the list will be distributed during the course. If you want something on the list and I have not distributed it, please see me.

- Balke, A. and Pearl, J. (1997). Bounds on treatment effects from studies with imperfect compliance. *Journal of the American Statistical Association*, **92**, 1171-1176.
- Cooper, G. (1997). An overview of the representation and discovery of causal relationships using Bayesian networks. To appear in: *Computation, Causation and Discovery*, (C. Glymour and G. Cooper eds.) AAAI/MIT Press: Menlo Park.
- Efron, B. and Feldman, D. (1991). Compliance as an explanatory variable in clinical trials. Journal of the American Statistical Association, 86, 9-25.
- Goetghebeur, E. and Molenberghs, G. (1996). Causal inference in a placebo-controlled clinical trial with binary outcome and ordered compliance. *Journal of the American Statistical Association*, **91**, 928-934.
- Heckerman, D., Meek, C. and Cooper, G. (1997). A Bayesian approach to causal inference. Technical report MSR-TR-97-05, Microsoft Research.
- Holland, P. (1986). Statistics and causal inference. Journal of the American Statistical Association, 81, 945-970.
- Manksi, C. (1995). *Identification Problems in the Social Sciences*. Harvard University Press: Cambridge, Mass.
- Mark, S. and Robins, J. (1993). Estimating the causal effect of smoking cessation in the presence of confounding factors using a rank preserving structural failure time model. *Statistics in Medicine*, **12**, 160-1628.
- Pearl, J. (1995). Causal diagrams for experimental research. *Biometrika*, 82, 669-710.
- Robins, J. (1997). Causal inference from complex longitudinal data. To appear in *Latent* Variable Modeling with Applications to Causality.
- Robins, J. (1986). A new approach to causal inference in mortality studies with sustained exposure periods – application to control of the healthy worker survivor effect. *Math-ematical Modelling*, 7, 1393-1512.
- Robins, J. (1989). The control of confounding by intermediate variables. *Statistics in Medicine*, **8**, 679-901.
- Robins, J., Mark, S. and Newey, W. (1992). Estimating exposure effects by modelling the expectation of exposure conditional on confounders. *Biometrics*, **48**, 479-495.
- Robins, J. and Wasserman, L. (1998). On the impossibility of inferring causation from association without background knowledge. To appear in: *Computation, Causation and Discovery*, (C. Glymour and G. Cooper eds.) AAAI/MIT Press: Menlo Park.

- Robins, J. and Wasserman, L. (1998). Estimation of effects of sequential treatments by reparameterizing directed acyclic graphs. To appear.
- Rosenbaum, P. (1995). Observational Studies. Springer: New York.
- Rosenbaum, P. and Rubin, D. (1983). The central role of the propensity score in observational studies for causal effects. *Biometrika*, **70**, 41-55.
- Rubin, D. (1974). Estimating causal effects of treatments in randomized and nonrandomized studies. *Journal of Educational Psychology*, **66**, 688-701.
- Rubin, D. (1978). Bayesian inference for causal effects: The role of randomization. Annals of Statistics, 6, 34-58.
- Shafer, G. (1996). The Art of Causal Conjecture, MIT Press, Cambridge, Mass.
- Spirtes, P., Glymour, C. and Scheines, R. (1993). Causation, Prediction, and Search. Springer: New York.
- Spirtes, P., Glymour, C. and Scheines, R., Meek, C., Fienberg, S. and Slate, E. (1991). Prediction and experimental design with graphical models. Technical report.
